Read Online Archaeobacteria And Eubacteria

Archaeobacteria are so named because biochemical evidence indicates that they evolved before the eubacteria and have not undergone significant change since then. The archaeobacteria generally grow in extreme environments and have unusual lipids in their cell membranes and distinctive RNA molecules in their

structure of Archaeobacteria varies greatly due to the extremely dissimilar environments among which these organisms range. While most have cell walls similar to those of the eubacteria, their composition differs greatly both from that of the eubacteria and between the different types of archaeobacteria.
