Introduction. This course presents several case studies. Each case presents patient history, test results and some vital signs. Auscultation skills are used as part of most of the cases as well as the assessment of the patient's blood pressure. These cases challenge each student ability to solve diagnostic and therapeutic issues based upon knowledge and patient assessment skills.

Respiratory care case study - indierepublik.com

Respiratory depression is a complication that often follows cancer-related surgery and can result in life-threatening consequences. Oncology nurses caring for postoperative patients must monitor for respiratory complications and implement measures to prevent respiratory depression. A review of postoperative respiratory depression risk factors, clinical findings, and monitoring will be presented in this article using a case study.
