Hinton's main contribution to the field of deep learning was to compare machine learning techniques to the human brain. More specifically, he created the concept of a "neural network", which is a deep learning algorithm structured similar to the organization of neurons in the brain.

I've always wanted to see if I could utilize a Deep Neural Network to play games, after being inspired by some other projects such as training a Recurrent Neural Network (RNN) to play Mario Kart 64 and using Deep Q-Learning to teach an AI to learn to drive (very simply). I wanted to see what I could do with these ideas.
