SBIM is an emerging research field which aims to create the computer tools required to shift to a new paradigm: sketches should be used as input to create digital engineering models in a true computer-aided ideation environment. In such an environment, informal and unstructured ideation processes could flow freely, and final 3D shapes would be automatically derived from such ideation processes.

Great engineering is evidenced as much through the ability to communicate ideas via freehand sketching as it is by manipulating differential equations, by making a computer "sing," or for that matter, by presenting carefully reasoned, well-crafted prose. While some of us are blessed with the natural ability to draw, most are not.
