Kuroki (Kuroki, 1981) initiated the notion fuzzy ideals, bi-ideals, quasi-ideals of semigroups. The book by Mordeson (Mordeson, Malik & Kuroki, 2003), deals with the theory of fuzzy semigroups and their use in fuzzy coding, fuzzy finite state machines and fuzzy languages.

CiteSeerX - Document Details (Isaac Councill, Lee Giles, Pradeep Teregowda): In this paper, the concepts of (λ, μ) -N-fuzzy bi-ideal and (λ, μ) -N-fuzzy quasi-ideal were introduced which can be regarded as a generalization of common correspondence concepts, and some properties of (λ, μ) -N-fuzzy bi-ideal and (λ, μ) -N-fuzzy quasi-ideal were discussed.

The paper examines the generalized rough fuzzy ideals of quantales. There are some intrinsic relations between fuzzy prime (primary) ideals of quantales and generalized rough fuzzy prime (primary) ideals of quantales. Homomorphic images of “generalized rough ideals, generalized rough prime (primary) ideals, and generalized rough fuzzy prime (primary) ideals” which are

In this paper, we introduce the concepts of generalized fuzzy \mathbb{R} -ideals and fuzzy \mathbb{R} -ideals of semigroups, and study their related properties by fuzzy points.

Let A be a proper (\in, \in) -fuzzy interior ideal of S with $\text{Im}(A) = \{t_0, t_1, \dots, t_n\}$, where $t_0 > t_1 > \dots > t_n$ and $n \geq 2$.

Then $U(A; t_0) \subseteq U(A; t_1) \subseteq \dots \subseteq U(A; t_n) = S$ is the chain of \in -level interior ideals of A .

As a natural consequence, the idea of soft ideals of a soft semigroup originates. Soft ideals over a semigroup with a fixed set of parameters form a distributive lattice. Soft sets are a very handy tool. Soft ideals over a semigroup characterize generalized fuzzy ideals and fuzzy ideals with thresholds of S .

Inspired by these outstanding findings, based on Yin and Zhan and Ma et al. idea, we introduce a more generalized form of $(\in, \in \vee q)$ -fuzzy generalized bi-ideals called (α, β) -fuzzy generalized bi-ideals of an ordered semigroup S , where $\alpha, \beta \in \{\in \gamma, q \delta, \in \gamma \wedge q \delta, \in \gamma \vee q \delta\}$ with $\alpha \neq \in \gamma \wedge q \delta$ and discuss several ...

GENERALIZED FUZZY BI-IDEALS OF TERNARY SEMIGROUPS 443 Theorem 3.3. Every S -norm S satisfies the inequality $SD(x;y) \leq S(x;y) \leq SM(x;y)$; for all $x;y \in [0;1]$: Proof. By Theorem 3:2, we have $TM(x;y) > T(x;y) > TD(x;y)$, for all $x;y \in [0;1]$, $1 \leq TM(x;y) \leq 1 \leq T(x;y) \leq 1 \leq TD(x;y)$. In the present paper, we substituted a universe set by a quantale and introduced the notions of generalized rough fuzzy prime (semiprime, primary) ideals in quantale. We see that the lower and upper approximations of fuzzy ideals, using SSV-Hom, are fuzzy ideals, respectively.

This paper has explored theoretical methods of evaluation in the identification of the boundedness of the generalized fuzzy gamma ideals. A functional approach was used to undertake a characterization of this structure leading to a determination of some interesting gamma hemirings theoretic properties of the generated structures.
