This is a wide ranging book consisting of twenty-one chapters split into five sections. The first two sections cover the fundamentals and polymer initiating systems. The eleven chapters in these two sections are written by the editors alone for the first section and in collaboration with others for the second section.

Handbook of Vinyl Polymers: Radical Polymerisation ...

As for other polymerizations, molecules of appreciably high molecular weight can be formed in the course of the chain reaction. Playing the predominant role in technical polymer synthesis, vinyl monomers can be mostly polymerized by a radical mechanism. Exceptions are vinyl ethers, which have to be polymerized in an ionic mode.

Handbook of Radical Polymerization | Polymer Science ...

Not all monomers are susceptible to all types of initiators. Radical initiation works best on the carbon–carbon double bond of vinyl monomers and the carbon–oxygen double bond in aldehydes and ketones. Initiation has two steps. In the first step, one or two radicals are created from the initiating molecules.
