Terraform is built by Hashicorp and uses Hashicorp Configuration Language (HCL) to write easy to read scripts. Terraform can work with more than 70 providers including AWS, Azure, GCP, and in fact any API provider such as Kubernetes, Docker, Github, etc. Steps to install Kubernetes Cluster By using Terraform Requirements:

How to install Kubernetes Clusters Using Terraform?

Terraform vs. Ansible. Terraform and Ansible are both Infrastructure as Code tools, but there are a couple significant differences between the two: While Terraform is purely a declarative tool (see above), Ansible combines both declarative and procedural configuration. In procedural configuration, you specify the steps, or the precise manner, in which you want to provision infrastructure to the desired state.
