The basic structure of human body is skeletal system. The entire body is built around the hard framework of Skeleton. At birth around 270 bones are present, by adulthood this total decreases to around 206 bones when bones merge together. About the age of 21 the bone density within the skeleton achieves its full density.

Human Skeletal System - Earth's Lab

Laboratory tests are often helpful in making the diagnosis of a musculoskeletal disorder. For example, the erythrocyte sedimentation rate (ESR) is a test that measures the rate at which red blood cells settle to the bottom of a test tube containing blood. The ESR is usually increased when inflammation is present.
