Lesson 9 Perimeter And Area

Description. In this lesson, students find the perimeter and area of triangles in the plane. Students realize that the distance formula is required to find the perimeter. Finding the area is

Online Library

Lesson 9

more of a challenge, but the teacher guides students to understand that surrounding the triangle by a rectangle allows students to compute the area of the rectangle and the three right triangles that surround it and subtract these quantities.

Perimeter And Area Of Triangles In The Cartesian

Invite him to test whether this is always true by creating rectangles having a perimeter of 12 centimeters. He should find that the square will have the greatest area when the perimeters are the same. Explain that during this lesson, your child will be using what he knows about the relationship between perimeter and area to solve problems.

Lesson 9: Triangles Connecting Perimeter and Area

Lesson 9: Perimeter and Area of Triangles in the Cartesian Plane
Student Outcomes
Students find the perimeter of a triangle in the coordinate plane using the distance formula. Students state and apply the formula for area of a triangle with vertices $(0, 0)$, (a, b) , and (c, d) .
