16 Images of Incomplete And Codominance Worksheet Answers

Closely related to incomplete dominance is codominance, in which both alleles are simultaneously expressed in the heterozygote. We can see an example of codominance in the MN blood groups of humans (less famous than the ABO blood groups, but still important!). A person's MN blood type is determined by his or her alleles of a certain gene.

Incomplete dominance, codominance & multiple alleles ...

Incomplete dominance is when there is a blending of the two alleles that results in a third phenotype that doesn't look like either of the parents. The classic example is when a white flower and red flower are crossed. With incomplete dominance, all their offspring would be solid pink flowers, a completely new phenotype.
