multithreading - Memory management while using threads ...

The multithreading in ArcGIS Pro makes it possible for the geoprocessing thread to run independently from other threads. This means that when a tool is running you can do other things in Pro such as add new data to a map, navigate and make selections in the map, change a layer's symbology or labels, create and modify a layout, georeference an image, and even find and fill in another geoprocessing tool.
