The control of industrial processes and automated manufacturing systems requests accurate, moreover, linearized sensor measurements, where numerous sensors have nonlinear characteristics. In mechatronic systems, accurate measurement of the dynamic variables plays a vital role for the actuators to function properly.

Sensors and Digital Signal Conditioning in Mechatronic ...

Introduction to sensor measurements, sensor characteristics and parameters. If we regard the sensor as an input-output system, the stimulus (input) is a measured variable, a physical or chemical quantity (in most of the cases non-electrical). In most of the cases the signal (output) is an electrical quantity (voltage). The purpose of a sensor is to respond with an electrical signal to an input ...
