Litmus paper is a type of pH paper made by treating the paper with natural dyes from lichens. The litmus test is performed by placing a small drop of sample onto the colored paper. Usually, litmus paper is either red or blue. Red paper turns blue when the pH is alkaline, while blue paper turns red when the pH turns acidic.

### Litmus Paper and the Litmus Test - ThoughtCo

The test for chlorine involves holding damp litmus paper close to the gas source and observing the colour change. If chlorine is present the paper will be turned white due to the bleaching effect of chlorine.

### Test for Chlorine | Edexcel GCSE Chemistry Revision Notes

What are the General Tests for Chlorine Gas? 1) Chlorine gas, Cl 2 (g) is green-yellow in colour. 2) Chlorine gas has a pungent choking smell. 3) Chlorine gas turns moist litmus paper from blue to red and moist universal indicator paper to red - it is acidic. After turning red both papers are then bleached white. 4) Chlorine gas will put out a lit splint.

How to test chlorine sanitizer concentration: You will need to use chlorine test strips to monitor the concentration of your chlorine solutions. Test strips for chlorine sanitizers are strips of paper specifically designed for testing chlorine concentrations only. Dip a strip into the solution and immediately remove.

### A Guide to Sanitizer Types and Test Strips for Restaurants ...

HCl turns the litmus red - it doesn't bleach it red. The word 'bleach' is used to show that the colour is being lost, i.e. it is turning white. HOCl is the bleach in the reaction. The reason why it bleaches organic matter probably is due to loss of conjugation because of addition reactions occuring when the H-OCl meets a double bond.

### Test for chlorine gas: why does damp litmus paper become ...

Chlorine has a characteristic sharp, choking smell. It also makes damp blue litmus paper turn red, and then bleaches it white. Chlorine makes damp starch-iodide paper turn blue-black.
