Woodward Epg Speed Control Manual

The Electrically Power Governor (EPG) is designed for precise isochronous speed control of diesel engines. The electric governor is especially suited for prime movers without a mechanical drive or hydraulic oil supply for the governor and which have low-mass, low friction fuel linkages.

EPG Control - Woodward

Each Woodward Electrically Powered Governor (EPG) system includes three basic parts: □ A magnetic pickup (MPU) which senses engine speed from an engine- driven gear. □ A speed control which receives the speed signal from the MPU, compares it to a reference signal, and generates a control signal which the control sends to the actuator. □ An actuator which receives the signal from the control and positions its output shaft according to this signal.
